Hydro One, together with Toronto Hydro, is making significant upgrades to its electricity infrastructure to provide adequate and reliable power to the west end of Toronto. Power West Toronto is required to strengthen the city's electricity system, accommodate the growing needs of homes and businesses in Toronto, and is required to electrify the Eglinton Crosstown LRT.

The project involves replacing 10 km of overhead transmission line to accommodate additional power that will come from Hydro One's Runnymede Transformer Station, located at Jane Street and St. Clair Avenue West. Work will begin this summer.

Construction activities will involve reinforcing the existing towers with steel, and replacing the overhead wires with larger wires to accommodate the increase in power capacity. The existing wood poles near Montgomery Road and Westrose Avenue will be replaced with taller steel poles (11A and 11B on map). The upgraded wires will be heavier and require additional poles to support the weight.

In order to complete our work safely, construction activities may temporarily restrict access to recreational spaces and walkways along the corridor.

We know construction can be disruptive and we are committed to mitigating this as best we can. To ensure the community knows what to expect throughout the duration of the project, we invite you to attend our Community Information Centre to learn more about the project, ask questions and meet the project team.
