

POWER

WEST TORONTO

Hydro One, together with Toronto Hydro, is making significant upgrades to its electricity infrastructure to provide adequate and reliable power to the west end of Toronto. Power West Toronto is required to strengthen the city's electricity system, accommodate the growing needs of homes and businesses in Toronto, and is required to electrify the Eglinton Crosstown LRT.

Power to Move, Power to Grow.

The project involves installing new electrical equipment at Hydro One's existing Runnymede Transformer Station (TS), shown on the reverse map, which will require expanding the current station footprint. This is part of a larger effort which also includes upgrading 10 km of the existing overhead transmission line extending from the station.

Construction activities will be completed in stages, with work at Runnymede TS scheduled to begin in June 2017. In order to complete our work safely, construction activities may temporarily restrict access to recreational spaces and walkways along the corridor.

To learn more about the need for this project, construction timing and details as well as what you can expect in your community, we invite you to attend a **COMMUNITY INFORMATION CENTRE**.
